Pre-class Questions: Sections 4.5

Feel free to ignore the proofs in this section.

1. Can you write down what the two parts of the Fundamental Theorem of Calculus say without looking in the book?

2. At the end of the chapter the book refers to integration and differentiation as *inverse operations*. What do you think the book means by this? Do you think they are inverse operations?

3. What questions do you have about the Fundamental Theorem of Calculus?
